Year 2026/2027 - Friday Afternoon Drink 2 - Month 10

Public Void Open();

It is already our second FriAD of this year, which means it is time for the second edition of the PVC! Now that we are already halfway through the first module, I hope you got back into your study rhythm. Either way, you can escape it now at this FriAD! How nice is that?

Rating the O&Olympics games (as a tapper)

Last Tuesday we had a very cool, innovative drink, the O&Olympics drink, here there were a lot of "sports" to try. I was bartending this drink, so I didn't get to participate in the games. However, I could watch some of the games from behind the bar. So let's rate the games (from the view of a bartender):

1. **The beermile**: this one was fun to watch. Seeing all the people in discomfort from having to run after chugging a drink made me feel a lot better. Some teams were doing a really good job and were running really quickly. Some of them were also quite fast at chugging, although a few in particular were having a bit of trouble getting the golden liquid down their throats, which caused their team to lose, unfortunately. But they didn't lose to just a normal team; they also lost against a solo runner.

2. **Spijkerpoepen:** This was quite far away from the bar, so I did not see that much, but I did see some nice squats from some people. So unless you were a bit drunk and lost your coordination, it was probably a fun activity.

3. **Beer pong:** This was also far away, but I did see some people celebrating, so I guess it was fun.

4. **Flunkybal:** I saw a shoe flying around, so it was either fun, or people were very bad at aiming.

5. **Koekhappen:** I honestly did not see this activity happen, also because at the end there was still a crate of ontbijtkoek left, but according to the committee it did happen.

6. **Twister:** This was an amazing activity, mainly because it was right in front of the bar, and mainly because people weren't that great at balancing anymore, so a lot of people fell over and later complained that they shouldn't have done it.

7. **Flip the cup:** as far as I know, this was basically a beer relay. I saw some people chugging quite quickly, so I guess it was quite competitive.

Those were all the activities. It was a really fun drink, so thank you, Theme Drink Committee, for organising it.

Purple Friday

Lars Schepers

Today is Purple Friday, which was organised after Spirit Day became popular. Purple Friday has a beautiful tradition: wear purple!

Purple is a colour similar in appearance to violet light. In the RYB colour model historically used in arts, purple is a secondary colour created by combining red and blue pigments. In the CMYK colour model used in modern printing, purple is made by combining magenta pigment with cyan pigment, black pigment, or both. In the RGB colour model used in computer and television screens, purple is created by mixing red and blue light to produce colours that appear similar to violet light.

According to colour theory, purple is considered a cool colour. Purple has long been associated with royalty. Roman magistrates wore purple; it became the imperial colour of the rulers of the Byzantine Empire and the Holy Roman Empire, and later of Roman Catholic bishops. Similarly, in Japan, the colour is traditionally associated with the emperor and aristocracy. This means wearing purple makes us feel a bit like royalty. How fun! HAVE A PURPLE DAY!

Top 100

Conner Hof

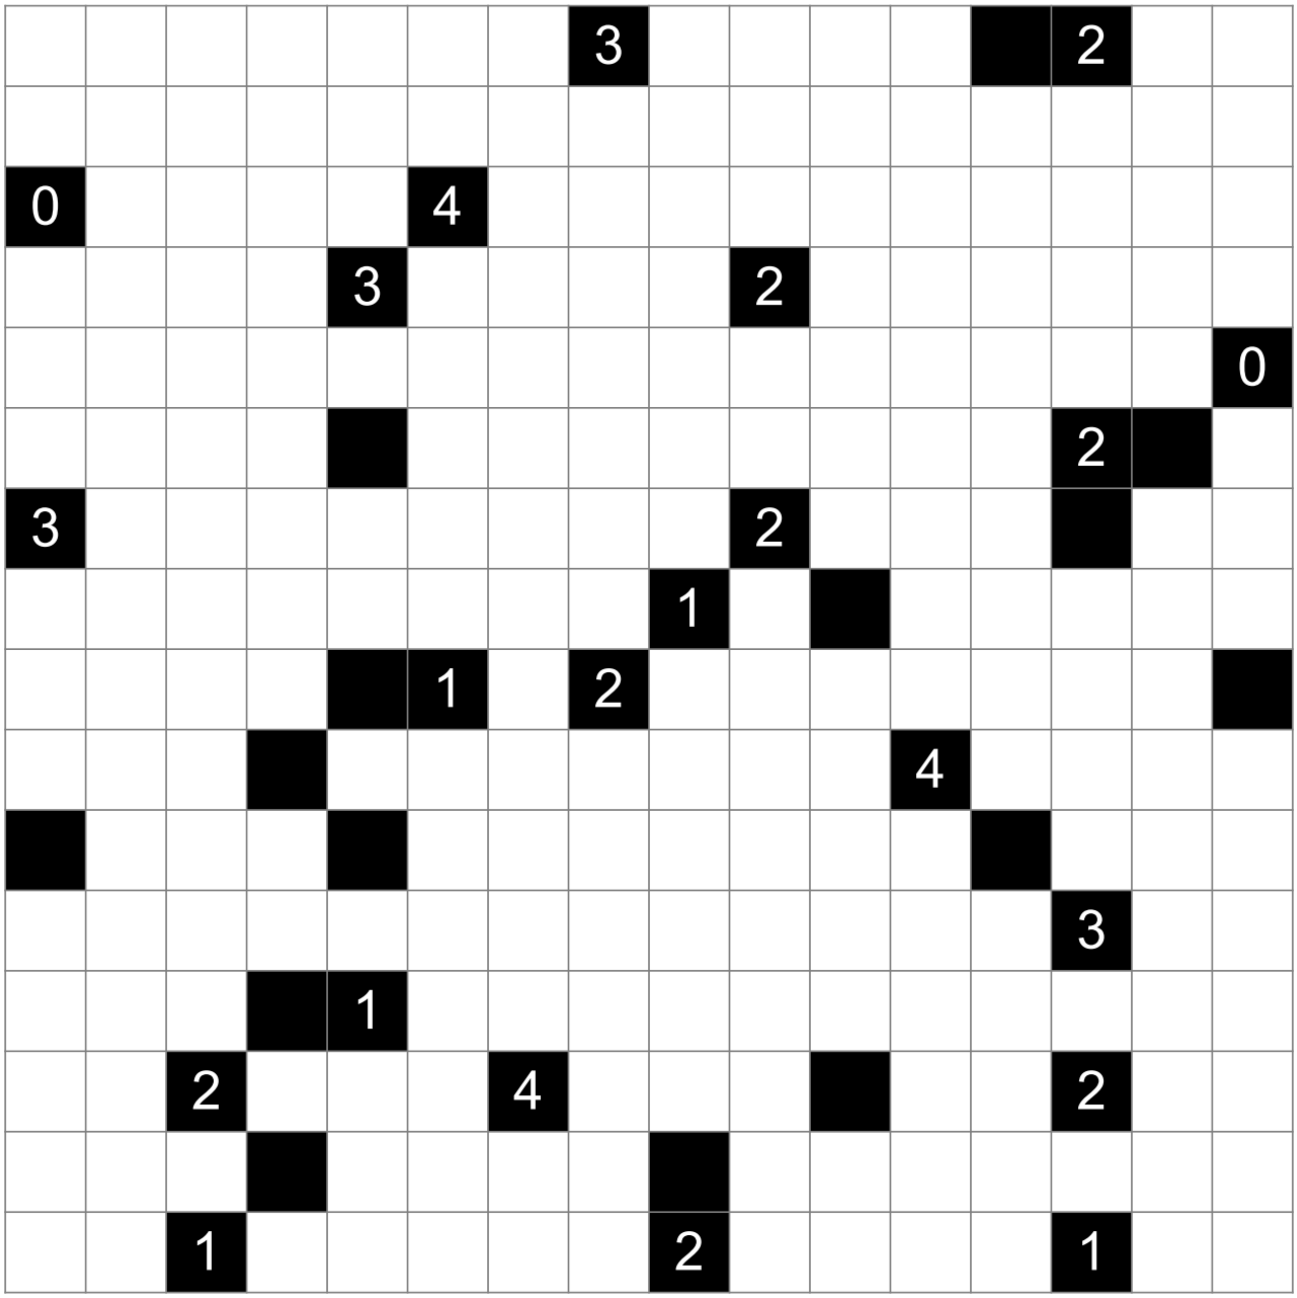

Have you heard the news? There will be another Top 100 Café this year! During this amazing event, on the Friday before the Christmas break, we will listen to the Top 100 songs as voted by UT students (that's you!). Exact details are still being determined by the committee, but rest assured: it will be epic as always. With a living room set-up, possibly a biergarten, hot chocolate, and gluhwine, you can be certain the vibes will be good.

Join us for our hype drink on Tuesday, November 10th, to learn more and to cast your vote!

Public Void Puzzle();

As this week is all about not putting people into predefined squares, let's make a puzzle where you have to make squares! This is a Shakashaka puzzle. The aim is to fill the grid with empty white cells and triangles so that all of the white areas form rectangles.
Some cells are black with numbers in them; this tells you how many triangles are next to this cell.

Good luck!
