public void close();
Year 2026/2027 - Friday Afternoon Drink 3 - Month 10

Public Void Open();

We already have our third public void close today. It's going quickly! Today has been a chill day for a lot of people, because they did not have any lectures because of the open days. So you might not have to unwind as much as normally, but hopefully you can still enjoy a drink.

Open days

Today and tomorrow are the open days of the university. This is where we have to convince all the potentially interested people to ~~drink beer here~~ study here, of course. Most people here got a nice day off, so hopefully you enjoyed it. From our room I could see the large number of people swarming the O&O square every so often... all those potentially new people who are obviously very eager to join all the associations. I also sometimes saw our lovely people from the association , who help with the open days for TCS, walk around. This year they have to wear colourful polos. And it just so happens that the colour is yellow; so it is quite easy to spot them, just look for some minions.

Week of Education

This week was the Week of Education. There were a lot of activities this week, all organised by the Education Committee! The (almost yearly now) lunch lecture by Tom van Dijk and the Pizza workshop (which you can read more about later), for example! It was a lot of fun and a great Week of Education.

Beer

Conner Hof

Disclaimer: this is not a promo for Bagger and is an opinion piece by Conner.

Sometimes, you have an idea so grand that it could probably change the world. An idea so mind-shatteringly good that you just know it will impact everyone.

This ain't one of them; I just wanted a funny BAC tracker app. With Promille, you can record your drinks, and it scientifically calculates your BAC. It shows a graph of your BAC over time, calculates when you can drive again, and shows a nice graph. But that's not all: you can add your friends and even set email notification alerts! That way, you will always be the first to know your friend is a bit too far gone. Try it out at *bier.dispuutbagger.nl/promille*
Feature requests can be sent to our vibe-coding committee at *bier@dispuutbagger.nl*

The Pizza Workshop

Manon Kamphuis

"Last Wednesday, the Education Committee organised the Pizza Workshop for the Week of Education! During the workshop, the P.D. Lorenzo Gatti gave a small presentation to kick things off. Now, usually P.D. stands for "Programme Director", but last Wednesday. We had not invited the Programme Director, but instead the Pizza Director!
During his presentation, we learned that it is simple, but not easy, to get this flashy title. There are only two things needed: be Italian and have demonstrable proof that you have made and eaten a lot of pizzas, kind of like work experience. Lorenzo showed us a lot of pictures of pizzas he had made throughout the years, dating all the way back to 2013! After the presentation, everyone got a chance to work on their demonstrable proof of making pizzas and had a lot of fun. As for being Italian, we were assured you can marry into it. So if you really want to become a Pizza Director, you can definitely achieve it if you really set your heart on it (quite literally).

Study Tour logos

Last Tuesday, the study tour committee revealed where we will be heading next year: Hong Kong, Taiwan, and South Korea. But while I was looking through the old study tour website, I thought it could maybe be fun to rate the logos of some of them. So here we go:
Study Tour Duality: actually a very good logo, as it matches nicely with the name as well, because the logo is "separat-

ed" into two parts.
Study Tour Evolve: it does not immediately say anything about the tour itself, but is quite clean and does have some asian theme to it.
Study Tour Fuente: looks a bit weird, does not really match the theme, but it does somehow match the destination vibes.
Study Tour Shift: it is quite clean and does match the theme, but I find it a bit boring.
Study Tour Misc: the logo looks quite miscellaneous to me, but I don't really like it.
Study Tour USB 14.0: a very cool logo which matches the name very well.
Study Tour Noodle: quite a simplistic logo, and it makes sense for the destinations.

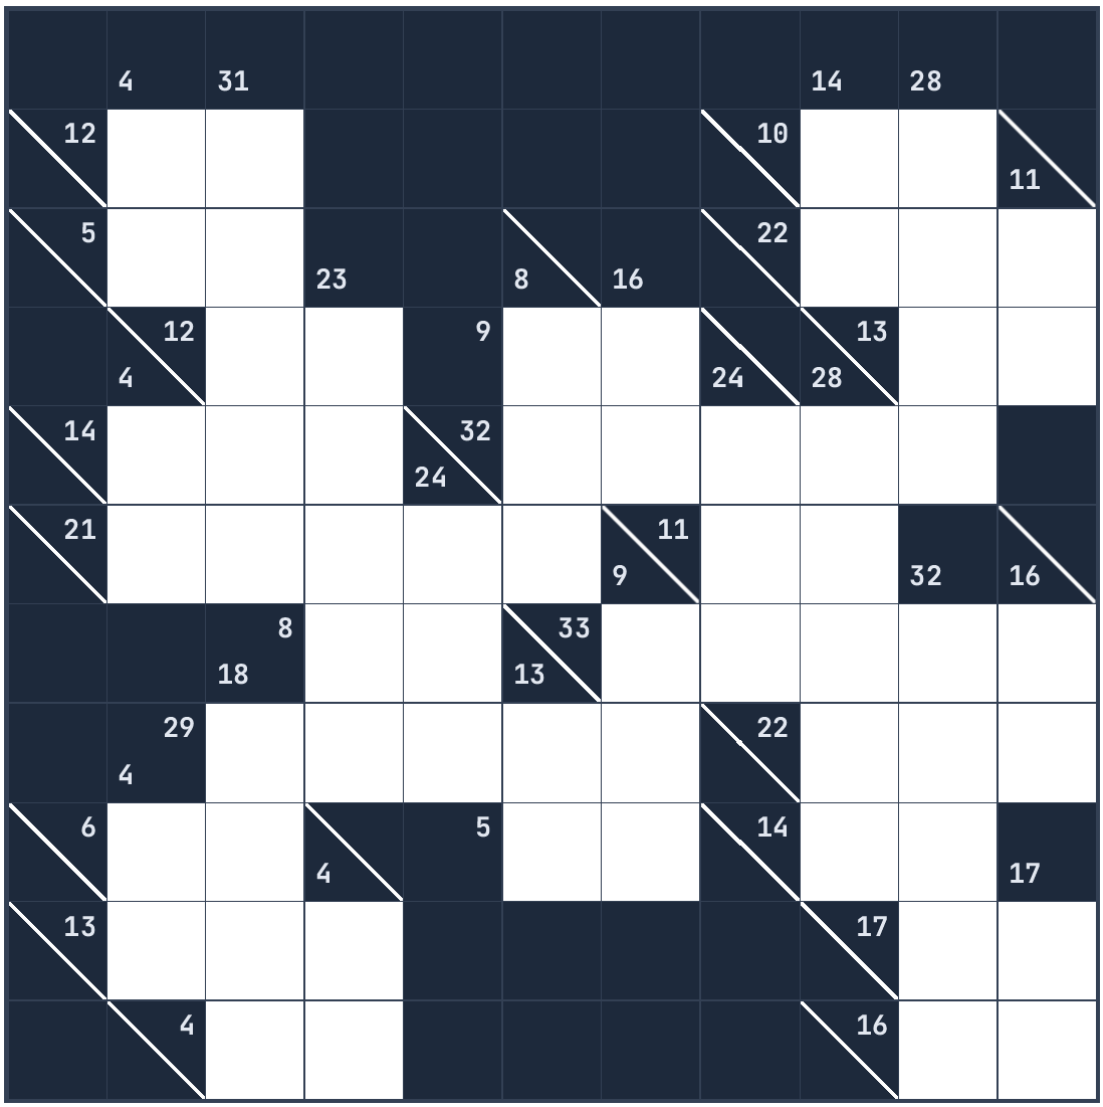

Public Void Puzzle();

This week the puzzle is a Kakuro puzzle. It is quite simple. You have to fill each white cell with a number from 1-9. Secondly, all the numbers in each row or column have to add up to the number in the black square. And lastly, no digit can be repeated in a row or column.
Now a bit of lore about this puzzle:

The Numbers Game: The History of Kakuro

While it feels like Sudoku's younger sibling, the math crossword Kakuro is actually much older. Canadian creator Jacob E. Funk first invented it back in 1950, calling it "Cross Sums." The puzzle spent decades as a steady staple of Western puzzle digests before crossing the Pacific in 1980. The legendary puzzle publisher Nikoli rebranded it as Kakuro—short for "addition cross"—in 1986. It quickly became a massive hit in Japan, eventually sparking a huge global comeback in 2005 when the rest of the world fell in love with logic puzzles all over again

I wish you the best of luck :)
